

# THE PRIMTEC ASSET SHERIFF

## Our modern inventory system for your company!

We have developed our Asset Sheriff inventory system as a modern platform for performing accurate, precise, fast and affordable inventories. In order to increase efficiency of stock-taking and improve productivity, it is essential to have a modern and versatile inventory system.

Our Asset Sheriff uses wireless RFID technology to detect objects without needing a direct visual line of sight, from a large distance, and even through closed cabinet doors.

Compared to traditional inventory, manual handling is eliminated, goods no longer need to be picked up, rearranging is no longer necessary and the required manpower is reduced.

On our mobile device you get an immediate overview of existing, missing or relocated objects. Additional detailed object information can be accessed at any time, such as photos, serial numbers, instructions, maintenance data, etc.

All data is stored centrally for evaluation, allowing you to get a fast and precise inventory as well as a current overview of your stock.

## TAKE OVER CONTROL OF YOUR INVENTORY BY USING OUR ASSET SHERIFF!
