

PRIMTEC.LABS - THE PRIMTEC SOFTWARE

We can't take the complexity out of your processes but we can minimise it!

Based on our universal primtec.Labs framework, we develop software applications for a wide range of different platforms in order to make your processes more efficient, transparent and individual.

The strength of primtec.Labs lies in its high degree of flexibility that makes it versatile enough to implement a wide range of solutions and reduces the amount of customisation required. That means we are able to quickly implement highly customised projects.

primtec.Labs is a mature and proven system that guarantees the highest degree of reliability and high availability in line with the most stringent industry standards. primtec.Labs is also constantly growing and learning to further develop itself dynamically as customer requirements change.

We work together to analyse and evaluate your processes and make use of automation from the very start in order to meet high quality standards. At the same time, we give a great deal of attention to usability: intuitive interfaces display only the information and processes that are actually required. User input is kept to a minimum in order to avoid handling errors.

YOUR ADVANTAGES BY USING PRIMTEC.LABS:

- ◆ Highest quality using a modular architecture
- ◆ High availability, high performance and scalable
- ◆ Machine learning for high-quality data processing
- ◆ Extremely flexible for fast implementation
- ◆ Customised workflows
- ◆ Individual userinterface and usability have high priority
- ◆ Easy to connect to your existing systems, e.g.: SPS or SAP, MS Dynamics AX, MS SQL Server, Oracle, NoSql databases and much more.

FOCUS IS PLACED ON PROVIDING AN INTUITIVE USER INTERFACE FOR BEST USABILITY!
